TITLE:	<u>Land Use Analysis</u>
AUTHOR:	Planning Division, Department of Community Development, Gainesville, Florida
SUBJECT:	Land Use Zoning Breakdown
DATE:	January, 1969
LOCAL PLANNING AGENCY:	Gainesville City Plan Board
SOURCE OF COPIES:	Clearinghouse for Federal Scientific and Technical Information, Washington, D.C. Department of Community Development, Municipal Building, Gainesville, Florida 32601 HUD Regional Office Library, Region III, 645 Peachtree Seventh Building, Atlanta, Georgia, 30323
HUD PROJECT NUMBER:	Florida P-54
SERIES NUMBER:	6 (of 12)
NUMBER OF PAGES:	116
ABSTRACT:	Detailed inventory and summary of existing land uses and zoning in the Gainesville Urban Area by planning units. Numerical analysis of types, sizes, and locations of land uses and zoning categories. Vacant land in each zoning category within each of the forty-seven planning units is given. Existing land use maps show spatial relationships. Briefly summarizes the quantitative makeup of all existing developed land. Intended as a guide to preliminary land use planning and the comprehensive plan itself, the study will be kept current through a regular updating procedure.

INTRODUCTION

An urban land use survey is a study of the spatial relationships between clusters of urban activities. The land use survey shows how the various urban activities – transportation, manufacturing, government, commerce, and residency affect the urban landscape and how, in turn, the urban landscape affects the efficiency of these activities. For example, the proximity of a supermarket to a residential area will determine the success or failure of that enterprise. Also, a land use survey defines the spatial relationships between the supply of natural resources and the demand for those resources.

The urban land use survey is central to the comprehensive planning process. By delineating existing spatial relationships between urban activities, the land use survey, along with economic and population forecasts, enables the planner to determine future space and locational needs for various uses such as highways, utilities, parks, offices, stores, houses, apartments, schools and industries. In addition, the land use survey is a measure of the efficiency of existing urban activity systems and thus provides the opportunity for improving these systems. The urban land use survey, in combination with other studies, is the foundation for the comprehensive land use plan, which provides for the optimum physical response to problems caused by growth and change.

PLANNING UNITS GAINESVILLE URBAN AREA

DEPARTMENT OF COMMUNITY DEVELOPMENT GAINESVILLE, FLORIDA 1968

PREPARED BY THE CITY OF GAINESVILLE UNDER CONTRACT WITH THE FLORIDA DEVELOPMENT COMMISSION. THE PREPARATION OF THIS MAP WAS FINANCED IN PART THROUGH AN URBAN PLANNING GRANT FROM THE DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT, UNDER AN AGREEMENT OF SECTION 807 OF THE PLANNING ACT OF 1954. 11-1-68.

LAND USE AND ZONING CLASSIFICATION AND CODING SYSTEM

Data on developed land within the Gainesville Urban Area was separated into two broad categories - land use and zoning.

Land use was broken down into eleven categories:

1. Residential
2. Office and Commercial
3. Wholesale and Industrial
4. Education
5. Public
6. Transportation and Communications
7. Recreation
8. Church
9. Non - Profit
10. Vacant
11. Public Right - of - Way

Residential land use includes: single family dwellings; multi-family dwellings; group quarters (such as fraternities, sororities, residence halls and other institutional housing) and mobile homes.

Office and Commercial land use includes retail business, commercial parking lots, commercial recreation, personal and business services.

Wholesale and Industrial land use includes wholesale business, warehousing, newspaper and printing, durable and non-durable manufacturing.

Educational land use includes State, local and private educational institutions.

Public land use includes all Federal, State and local facilities, with the exception of schools and utilities.

Transportation and Communication land use includes taxi, truck and bus terminals, public and private utilities and telephone, radio, and television facilities.

Recreational land use includes both public and private recreational facilities, with the exception of school playgrounds.

Non-Profit land use includes all non-governmental community facilities such as the American Legion and the Red Cross.

Vacant land includes agricultural land in use as well as unusable and usable, undeveloped land.

Public right-of-way land use includes streets, highways, sidewalks, as well as right-of-way easements.

Zoning was separated into twenty-seven categories - six of which are exclusive to the County and eleven of which are exclusive to the City - plus two special designations.

County	1.	A	Agriculture
	2.	BR	Business - Retail
	3.	BH	Business - Highway
	4.	BA	Business - Automotive
	5.	BW	Business - Wholesale
	6.	MB	Marine - Business
City	7.	RE	Residential Estate
	8.	R-2a	Multiple Family - Medium Density
	9.	AP	Administrative - Professional
	10.	BU	Business - University
	11.	BR-1	Central Business District
	12.	BR-2	Retail Business
	13.	BA-1	Business - Automotive, Restricted
	14.	BA-2	Business - Automotive
	15.	BI-1	Business - Institutional
	16.	BI-2	Business - Institutional
City & County	17.	SC	Shopping Center
	18.	R-1a	Single Family - Low Density
	19.	R-1b	Single Family - Medium Density
	20.	R-1c	Single Family - High Density
	21.	R-2	Multiple Family - Low Density
	22.	R-3	Multiple Family - High Density
	23.	RP	Residential - Professional
	24.	RM	Mobile Home
	25.	BP	Business - Professional
	26.	MS	Local Service - Industrial
	27.	MP	Manufacturing - Industrial
	28.	Public	Special Designation
	29.	Rails	Special Designation

Note: R-2a Zoning existent only in Planning Unit Number 40.

Although the special designations - "Public" and "Rails" - are not actually zoning categories, they were treated as such. Land designated "public" may not be used for non-government purposes, and the difficulty in dividing up land designated "Rails" by zoning districts would not have justified the end product.

The collection of land use data was divided into two parts - coding and measurements. All developed land was coded by field survey teams in accordance with the Land Use Classification Guide, which was devised by the Planning Division. The land use code is composed of five digits, with the first digit representing one of ten general land use categories, the second and third digits representing one of forty general functional categories and the fourth and fifth digits representing the specific service provided. For example, if the general land use was commercial, the first digit of the code would be 2, and if the general function of the establishment was to provide personal or business services, the second and third digits of the code would be 26, and if the establishment provided the personal or business service was a barber shop, the fourth and fifth digits would be 14. Therefore, for a barber shop, the code would appear on the land use maps as 2 - 26 - 14.

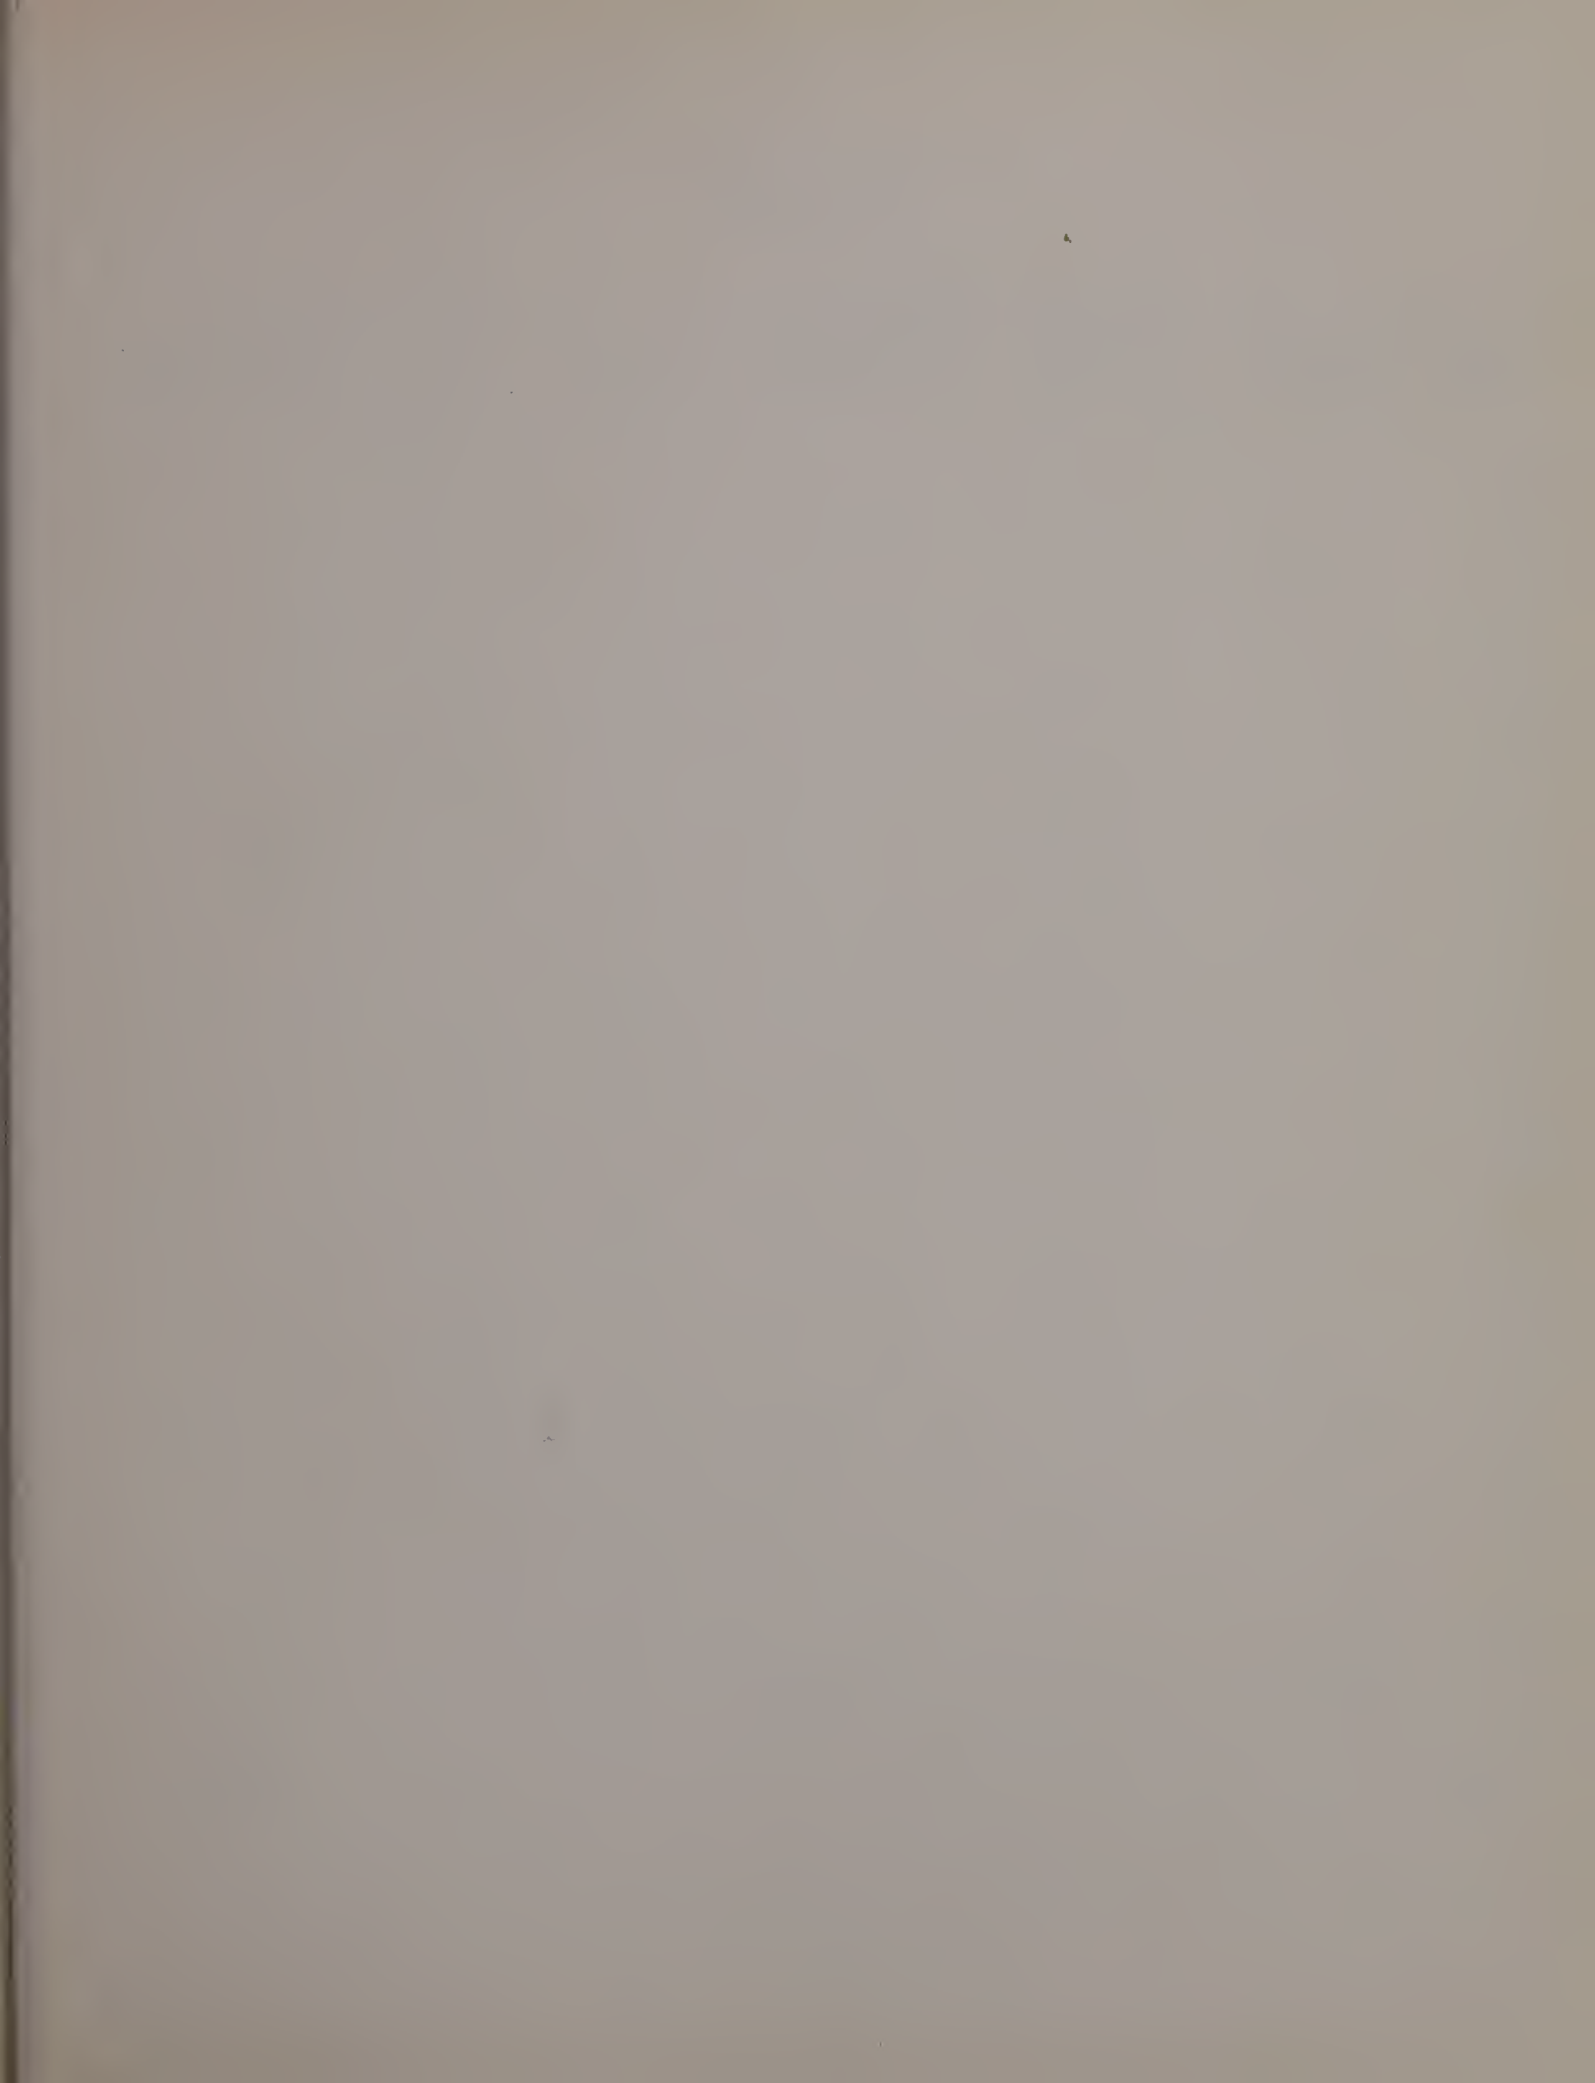

The data was recorded on 1" = 100' tax maps. Square footage figures were obtained from the tax maps and verified by field survey teams.

Data on the zoning of developed land was obtained from the Planning Division's official zoning maps and the data recorded on 1" = 100' tax maps.

DATA BY PLANNING UNITS

The following section contains an enumeration of uses and zoning of land for each planning unit in the Gainesville Urban Area. In order to determine the total amount of land in each zoning category and how it is developed, the table must be read horizontally. In order to determine the total amount of land in each land use category and how it is zoned, the table must be read vertically.

Note: Following Land Use and Zoning data tabulated October, 1968. Subsequent updating now underway. (See updating procedure, page 114.)

RESIDENTIAL LAND USE GAINESVILLE URBAN AREA

DEPARTMENT OF COMMUNITY DEVELOPMENT

GAINESVILLE, FLORIDA 1968

0 1000 2000 4000 6000 8000
SCALE IN FEET

ISSUED BY THE CITY OF GAINESVILLE
UNDER CONTRACT WITH THE FLORIDA
DEVELOPMENT COMMISSION. THE REEL
STATUS OF THIS MAP WAS SIGNIFIED IN
1967 THROUGH R.M. URBAN. REMAINING
GRAPHIC FROM THE DEPARTMENT OF HOUSING
AND URBAN DEVELOPMENT. UNDER
THE PROVISIONS OF SECTION 161 OF THE
HOUSING ACT OF 1954, AS AMENDED.

SUMMARY AND ANALYSIS

The following tables summarize the existing land use and zoning in the Urban Area. Table 48 contains the statistical summary of the various categories of land use, as well as vacant and public right-of-way and includes the zoning totals for all zoning categories utilized by the City and County. Tables 49 and 50 contain the individual land use and zoning summaries for the total Urban Area. Table 51 contains a statistical summary of the categories of developed land.

Of the total urban area of 83,819 acres, only 22,928 acres or approximately 28 percent, are developed for some urban use. These urban uses may be broadly categorized as land developed by private interests and those for public use. Functional uses developed by private interests include residential uses, commercial uses, industrial uses and various transportation and communication uses. These uses account for nearly 8,500 acres, or approximately 37 percent of the developed area. Land developed for public use includes educational uses, churches and non-profit uses, parks and playgrounds, and street rights - of - way. These uses account for about 14,450 acres or nearly 63 percent of the developed area.

The remaining portion of land within the urban area not included in the above groups of privately or publicly developed areas is unimproved vacant land. This total is included in the study to give a comprehensive accounting of all acreage within the planning area.

Privately Developed Areas

Residential More of the privately developed area is utilized for residential purposes than any other use. Approximately 6,300 acres or 27.5

percent, is so used. Most of the residential uses, however, are found within the corporate limits of Gainesville, or in the area immediately adjoining these boundaries. As might be expected, single family detached dwelling account for approximately 5,500 acres, or 87.3 percent of the total residential development. There are approximately 365 acres of land used for multiple family purposes and approximately 365 acres of land used for mobile home purposes.

Commercial The commercial segment of urban land use consists of all office, service, and retail establishments. These uses account for approximately 580 acres, or about 2.5 percent of the total developed area. As shown on the commercial land use map, the majority of the commercial and office uses are found within the City of Gainesville.

Commercial and office uses are located intermittently along the major transportation arteries in what may be termed "strip" development. The majority of the retailing activities, however, are concentrated in the Central Business District and in the shopping centers that have been constructed in recent years. These centers are all located within the City of Gainesville and are concentrated in the west and northwestern portions of the area.

Industrial and Wholesale Industrial and wholesale uses occupy approximately 410 acres or 1.77 percent of all developed land. The majority of these uses are located within the City with small concentrations of industrial uses located along Archer Road, north of the corporate limits on U. S. 441 and along SW 34th Street. As can be seen on the industrial land use map, the majority of the industrial uses are centered along the railroad lines on the southern portion of the City, north of 23rd Boulevard near Main Street, east of Waldo Road, north of 23rd Boulevard and in the City's planned Industrial Park north of the Airport.

Transportation and Communication . . . There are approximately 1,195 acres or 5.21 percent of the developed area devoted to transportation and communication activities. The Seaboard Coast Line Railroad rights-of-way and terminals occupy approximately 260 acres of land. Public and private utilities and the Gainesville Municipal Airport utilize approximately 750 acres of land. The various radio and television facilities and trucking terminals occupy the remaining 185 acres of land.

Publicly Developed Areas

Education . . . The various educational institutions occupy nearly 2,600 acres of land or 11.31 percent of the developed area. This unusually large percent reflects, in part, the unique characteristics of the Gainesville Urban Area, which acts as an educational center for Florida and the bordering Southeastern states. The campus of the University of Florida and scattered tracts of land used for research purposes currently occupy in excess of 1900 acres. At the present time the newly established Santa Fe Junior College does not utilize a significant amount of land, but will soon occupy a new, one hundred acre campus near the intersection of I - 75 and NW 39th Avenue. The Alachua County Board of Public Instruction utilizes in excess of 500 acres for school and administration purposes.

Recreation . . . There are 910 acres of land or 3.97 percent of the developed area devoted to recreational activities. A complete inventory of all such facilities was completed in March, 1968, and published in the Comprehensive Plan Report Number 4, titled "Community Facilities and Recreation Study".

Churches and Non - Profit Institutions . . . Churches and other non-profit uses occupy 220 acres of land or nearly one percent of the developed area. As would be expected, the land uses in this category are located in a scattered pattern throughout the Urban Area. It is pertinent, however, to note churches and student centers are clustered around the University of Florida campus while the non-profit lodges are located away from the center of the City.

Other Public . . . The majority of public land use within the Urban Area is State owned and utilized by the Sunland Training Center for the mentally handicapped and the Santa Fe Correctional Prison Farm Camp. The campus and prison farms account for 3,325 acres or nearly 14.5 percent of the developed area. The remaining public land consists of various governmental buildings as well as the County and State Road Department facilities and the City of Gainesville Public Works Compound.

Rights-of-Way . . . At the present time there are approximately 7,000 acres, or 8.38 percent of the total Urban Area and 30.65 percent of the developed area in public rights-of-way. This excessive amount of rights-of-way can be accounted for, in part, by the gridiron pattern of urban development that has taken place in Gainesville. Much of this development is characterized by 200 foot square blocks which are surrounded by public rights-of-way. Two major highways, plus several other State roads account for a large portion of this public land.

Vacant Area

There are currently in excess of 60,000 acres of land or 72.6 percent of the total urban area, that are considered to be vacant. Of this total 50,000 acres are retained in a holding category for future growth. The remaining land is zoned to a particular use category and could be developed as the demand is evidenced.

UPDATING PROCEDURE

The work of assembling and summarizing the land use and zoning data contained in this report represents a considerable expenditure of time and funds. In order to reap the benefits of this study over a long period of time the following procedure has been established to systematically update all of the statistics.

LAND USE AND ZONING STATISTICAL UPDATING PROCEDURE

1. LAND USE

- A. City - Update all quarter-section maps and quarter-section statistics on a monthly schedule using building permits for all non-residential construction and certificates of occupancy for all residential.
- B. County- Update all quarter-section maps and quarter-section statistics on a monthly schedule using building permits.
- C. City - County (Planning Unit) -
Adjust all statistics following completion of A & B.

2. ZONING

Update all zoning on quarter-section and large maps on monthly schedule.

3. LAND USE AND ZONING

Update gross statistics for City and County on a semi-annual schedule. (January and July).

Regardless of the precautions taken to keep this survey up to date, it is doubtful that it will be reliable for more than ten years. Not only do changes occur which go undetected by the updating procedure outlined above, but in this span of time the emergence of new analytical procedures can be expected to modify data requirements. Moreover, since the land use plan will require review and some revision from time to time, the timing of these resurveys will tend to fall into schedule with periods of re-study.
